

provide public secure internet access to local files on your PC in two clicks:

1. Press 'add files' button 
2. Enter strong password if you want to restrict access to your files
3. Open 'select files' dialog by pressing  button
4. Optionally pack your files into ZIP archive to speedup download and save network traffic. Provide desired archive name (first selected file name will be used as an archive name otherwise)
5. Once files are selected they will be added into internal browser storage and public access link will be copied into keyboard buffer. You can past that link into any place: social media comments, messengers etc.
6. Press button  in credentials column to copy credentials and share them via secure reliable channel
7. Use manger page to administrate your shared files
